Light distribution under the trees: modelling transmitted light overestimates understory crop photosynthesis

Adolfo Rosati

Council for Agricultural Research and Economics (CREA),
Spoleto (PG), Italy

short CV

Adolfo Rosati is a PhD researcher at the Council for Agricultural Research and Economics (CREA), Italy. He has been a Visiting Scientist for several years in different Countries, including the USA, Spain, UK, and has been a Fulbright scholar at the Agroforestry Centre of the University of Missouri, USA. He works on agroforestry and ecophysiology of trees and understory crops. He was a partner in AGFORWARD (www.agforward.eu), the largest agroforestry project funded by the European Commission (2014-2017). He is a founding member of the European Agroforestry Federation (EURAF) (www.eurafagroforestry.eu) and served in its executive committee as the national delegate for Italy and then as deputy secretary. He has been founder, coordinator or member of different Agroforestry working groups.
