

AULA de PROJETO (mestrado em Arquitetura Paisagista)
com o Professor Convidado MARC APPELMANS

The "Brussels Low Line project"

A linear urban park in the pedestrian zone of the historical centre
of Brussels as a motor for urban regeneration

Data e local:

8 de novembro de 2018 (quinta-feira) às 10 horas

Instituto Superior de Agronomia (Sala nº 39) da Universidade de Lisboa,
Tapada da Ajuda, Lisboa

Marc Appelmans studied landscape architecture and urban planning in Brussels, Belgium. He specialized also in landscape conservation in Munich, Germany, and art history at the ASSA (INSEAD) in Fontainebleau, France. During his training, he has been deeply influenced by the 'Dutch' way of tackling large landscaping projects where studies were always worked on with multidisciplinary teams associating landscape architects and urban planners, sociologists, biologists, traffic engineers and planners of all kind. Nowadays he works on consultancy commissions at SumProject+SumResearch dealing with long term planning and various masterplans as a coastal development around a new marina, planning of urban fringes, the development of urban agriculture, management plans for historical sites (UNESCO), neighbourhood regeneration programmes in deprived urban areas...). Recent commissions concern also a lot of urban design projects like the integration of the pedestrian zone in the urban fabric in Brussels, the integration of new tramlines and metrostations, public squares etc.
