10 de dezembro de 2018 (segunda-feira) às 10 horas (entrada livre)
Salão Nobre do Edifício Principal do Instituto Superior de Agronomia
da Universidade de Lisboa,
Tapada da Ajuda, Lisboa

Noel Kingsbury is internationally known as an innovator, writer and teacher in the fields of gardening and planting design. His 'New Perennial Garden' of 1994 helped launch the current wave of interest in naturalistic planting design. He followed up with a research doctorate in 2007 with the Landscape Department at Sheffield University. Noel has published around 25 books including four with Dutch designer Piet Oudolf. A great interest in innovative ways of presenting information is central to his work – the 'Rabbit's Eye View' workshop is widely regarded as one of the most cutting-edge teaching experiences with both amateur and a variety of professional groups, and has been delivered in ten countries to date. Increasingly he is working with MyOnlineSchool to deliver horticultural education globally. Noel also writes more generally about plants and our relationship to them; he has written two books on trees and the only comprehensive history of plant breeding (both ornamental and agricultural), and for five years co-chaired the Vista seminars at London's Garden Museum - a forum for the discussion of how gardens and landscapes are part of a wider intellectual world.
